

# Regain Control Over Your Cybersecurity

Upgrade your cybersecurity & align to hybrid working practices

## Overview

A widespread shift towards hybrid and remote working brings with it an uncomfortable reliance on personal responsibility, greatly increasing the odds of a security breach within your business.

In the face of this threat, legacy solutions struggle to cope - leaving your network vulnerable to cyber-attacks, your IT resources stretched, and your infrastructure compromised.

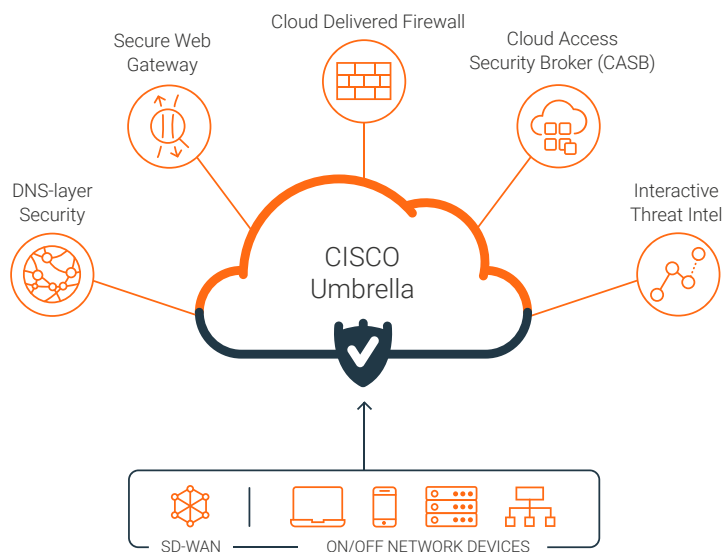

Instead, your organisation needs a cloud-focused decentralised security solution which allows you to access the internet directly, maintain control over your network and ensure your workforce always remains safe online.

## The Solution

As an Advanced Security Certified Cisco Gold Partner, SHI offers Umbrella, a cloud security platform built directly into the internet.

Cisco Umbrella is a cloud-native, multi-function security service which helps businesses of all sizes secure their network. As more organisations embrace direct internet access, Umbrella makes it simple to extend protection to remote users and branch offices.

It combines DNS-layer security, a secure web gateway, firewall, threat intelligence, and a cloud access security broker into a single cloud service to help organisations secure their network and increase internal agility.

## Key Umbrella Benefits

- Extensive and robust security coverage across all ports and protocols
- Umbrella's cloud infrastructure is highly resilient, boasting 100% uptime since 2006.
- Fast deployment and flexible service options to make scalability easy
- Comprehensive security protection for your network and beyond
- Immediate value and an overall low cost of ownership
- Efficient management framework thanks to a single dashboard layout
- Immediate scalability across a worldwide network
- Work securely from anywhere and stay protected whether Offsite, Home, Coffee Shop or any location

### DNS Layer Security

By integrating security at the DNS layer, Umbrella secures your network at the first line of defence.

This ensures that ransomware, malware, phishing, and botnet infiltrations are blocked before a connection can be established - preventing them from reaching your network or endpoints.

The solution's secure web gateway records and examines all web traffic for greater transparency, control, and protection.

Umbrella's firewall helps to log and block traffic using IP, port, and protocol rules for consistent enforcement throughout your environment.

### The SASE Approach

Umbrella utilises a SASE (Secure Access Service Edge) approach, moving security processes into the cloud. This provides security from edge to edge - whether remote offices, roaming users, data centres, or your headquarters.

This approach simplifies daily network management, provides comprehensive security protection, and improves the overall performance of the network.

As well as utilising the SASE approach, Umbrella is a fundamental part of Cisco's zero-trust security model, protecting users from threats no matter where they're working from.

#### Why SHI?

As a Cisco Gold Integrator Multinational Certified Partner backed by experts, SHI delivers complete and customisable Cisco solutions at the most competitive discount. Our knowledge and expertise can help you through any phase of your project and our Cisco practices are positioned to help you optimise your current and future IT investments.

To help you integrate Umbrella seamlessly into your organisation, SHI offers a free twenty-one-day trial of Umbrella, with no strings attached.

Having twenty-one days with Umbrella free of charge gives you enough time to configure your devices and become accustomed with the solution, providing proof of value in real time.

### Proof of Value

Every organisation has its own unique set of requirements, which is why SHI offers a free Proof of Value to help you decide if Umbrella is the right solution for your business.

Our expert team will help you to deploy the solution in your existing work processes, allowing you to experience the long-term value of Umbrella before committing to a purchase.

Not only can you appreciate the benefits of Umbrella, but you can also start using it to improve your cybersecurity straight away. As soon as you integrate Umbrella during your POV, you'll be able to pinpoint and remove issues that may exist within your business.

**To safeguard your organisation today, book your twenty one day Umbrella free trial now.**
