

## Applications Need Patching Too

**Patching is critical to keeping your environment safe.** However, surveys show that at least 60% of data breaches exploited vulnerabilities that patches had already been released for, but which were never applied. The reason they weren't applied is simple – patching is very time-consuming. Also, the very nature of critical, security-related patches means that it is difficult to plan for them in advance since they are released as and when needed.

Although all critical patches must be deployed as quickly as possible, they can be difficult to keep up to date, especially if you rely on software from multiple suppliers.

**While most patching focuses on operating systems, third-party applications could also have exploitable vulnerabilities.**

Pulseway's native patch management software has been designed to simplify patching with automated patch management for both OS and third-party applications that saves time and ensures that you never miss an update.

With Pulseway, it only takes minutes to create policies that ensure all your systems and third-party applications are patched and always up to date

### How 3PP Works

Pulseway's optional third-party patching (3PP) software enables you to manage all applications, ensuring they are always kept up to date with a **simple and automated command**. You can also use Pulseway 3PP to manage the deployment and removal of applications.

### Reduce Your Workload

With Pulseway, you can easily create an automated schedule that defines actions based on an OS patch's severity, name or description and for specific applications. You can also create an automated patching schedule and run patch policies manually, even from the Pulseway mobile app, or include them as a step in an auto-remediation workflow.

Pulseway's intuitive patching engine enables you to free up time to focus on other tasks, safe in the knowledge that you will never miss an important patch again.

## Out-of-the-Box Support for Over 280 Apps

Pulseway 3PP supports over 280 of the most popular business applications out of the box, with new titles added regularly. If you don't see your application on the list, don't worry. Our custom application feature allows you to easily add your own applications to this list.
