

Identity-Native Security for the AI-Native Era.

AI agents have moved from chatbots on the side to workforce members that act on your systems on people's behalf. The controls built for human logins cannot govern them, or say who is accountable. **Agen.co governs every agent action at runtime, anchored to the human behind it**, across every surface: endpoint, browser, gateway, and cloud.

WHAT YOU GET

01 · BECOME AI-NATIVE

Adopt agents at full speed

Approve new agents in hours, not quarters — with security in the loop on every action, not in the way.

- Playbooks to roll out copilots & coding agents
- Shadow AI surfaced before it's a headline

02 · IDENTITY-NATIVE

A human behind every agent

Every human, machine, and agent on one identity fabric — every action evaluated against the identity behind it.

- A named, accountable owner for every agent
- Per-action audit trail back to a person

03 · ONE PLATFORM

Every surface, one plane

Endpoint, browser, gateway, and cloud — internal and external agents governed identically. No blind spots between tools.

- Works with the IdP & stack you run today
- Internal workforce + customer-facing agents

INSIDE THE PLATFORM · SIX MODULES, ONE CONSOLE

Discovery

Continuous discovery across IdP, cloud, and endpoints. Every agent inventoried and risk-scored from day one, shadow AI included.

THE VALUE

You cannot govern what you cannot see. The full picture, in days.

MCP Gateway

One governed path between agents and your systems. 200+ connectors, 1,000+ governed tools, custom APIs live in minutes, 3-day SLA on new integrations.

THE VALUE

Connectivity becomes a policy decision, not an integration project.

Access & Data Protection

A verdict on every action in under 30ms: allow · step-up · human-in-the-loop · mask · deny. Sensitive fields masked in-line.

THE VALUE

Only the bad action stops. Everything else keeps flowing.

Observability & Evidence

Every action recorded with its full chain: request, identity, policy, verdict. Mapped to SOC 2, ISO 27001, GDPR. Exportable to your SIEM.

THE VALUE

The audit binder writes itself, at action time.

AgenShield · Endpoint

+ BROWSER · EA

Dangerous actions stopped on the device before execution, rolled out through your MDM. BrowserShield (early access) blocks company data at the paste into AI tools.

THE VALUE

The leak dies where it starts, even off the network.

Agent Registry

Every agent gets a machine identity: OAuth client, scoped, short-lived credentials. And a named human owner with an approval chain.

THE VALUE

"Who answers for this agent?" has an answer, in one click.

Governs whatever agent runs: Copilot Cursor Claude Code Agentforce ChatGPT n3n customer & partner agents

WHY IT HOLDS UP

<30ms

Per-action verdict, in-line, not after the fact

1,000+

Governed tools, new integrations in a 3-day SLA

1 day

From connect to governing your first agent

7-year

Identity foundation, in production at hundreds of enterprises

  

ENTERPRISE-GRADE TRUST

SOC 2 · ISO 27001 · HIPAA · SaaS, hybrid, or on-prem data plane · built on a 7-year CIAM foundation
