

VIDEO COURSE: WEB SECURITY

We asked Troy Hunt, Microsoft MVP for Developer Security, Pluralsight author and international speaker on Internet Security, to develop a custom video training course on **Web Security Fundamentals** to help you quickly come to grips with exactly how an attacker would attempt to penetrate your corporate network.

A course like this can cost \$\$\$ per head, but we're offering it to you completely free.

THE 7-PART VIDEO COURSE COVERS:

- ⦿ How attackers use improper escaping of web requests to inject malicious SQL queries.
- ⦿ Transport Layer Security and how if not implemented properly can give you a false sense of security
- ⦿ The proper way to store passwords in a database. Done correctly, they can be secured even if they're stolen or exposed in other ways.
- ⦿ Cross Site Scripting mitigation techniques.
- ⦿ How poor account management can allow users access to data they should never be able to see
